Luka Bear — Facility ROI at a Glance

Per-resident economics, overnight staffing offset, and operational fit for care communities. As of July 2026.

Per-resident cost at capacity

Luka Pro supports **up to 25 resident profiles per device**. One device serves a full memory-care wing or shared common area.

Plan	Monthly (retail)	Residents / device	Per resident / mo	At fleet pricing (10+ devices, 25% off)
Luka Pro (13″ touchscreen)	$179	up to 25	**$7.16**	**$5.37 / resident / mo**
Luka Standard	$129	up to 10	$12.90	$9.68 / resident / mo

Volume: **3–9 devices** 15% off · **10+ devices** 25% off + named support contact · **Own-It fleet (10+)** 15% off device, service unchanged.

Overnight staffing offset

A single 1:1 overnight private-duty aide typically runs **$18–$28 / hour** — roughly **$150–$225 per night**, or **$4,500–$6,750 per resident per month** for continuous 1:1 sitting.
Luka supports **overnight calming routines and staff notification**, so one overnight aide can cover a wing rather than sitting one-to-one. Reducing even a single night of 1:1 sitting per month covers a Luka device many times over.

> **Planning estimate, not a guarantee.** Luka Bear is a non-medical assistive companion. It does not replace required staffing, supervision, or clinical judgment. Figures are illustrative for budgeting only; actual staffing decisions remain the facility's.

Operational fit

Fast onboarding

- 30–60 minutes per wing
- Voice-driven setup — no IT project

Built for rotating staff

- Facility Admin PIN (4–8 digits) separates care configuration from day-to-day staff functions

Accountable by design

- Camera access is logged (audit trail)
- PIN-locked staff mode

Camera-optional deployment

- Video-Free, Consent-Video, or Full — matched to your program's rules

Facility procurement is supported with a quote, invoice, purchase order, W-9, and vendor registration (COI and NPI on file).
